- ✓ Dynatrace

About the Customer

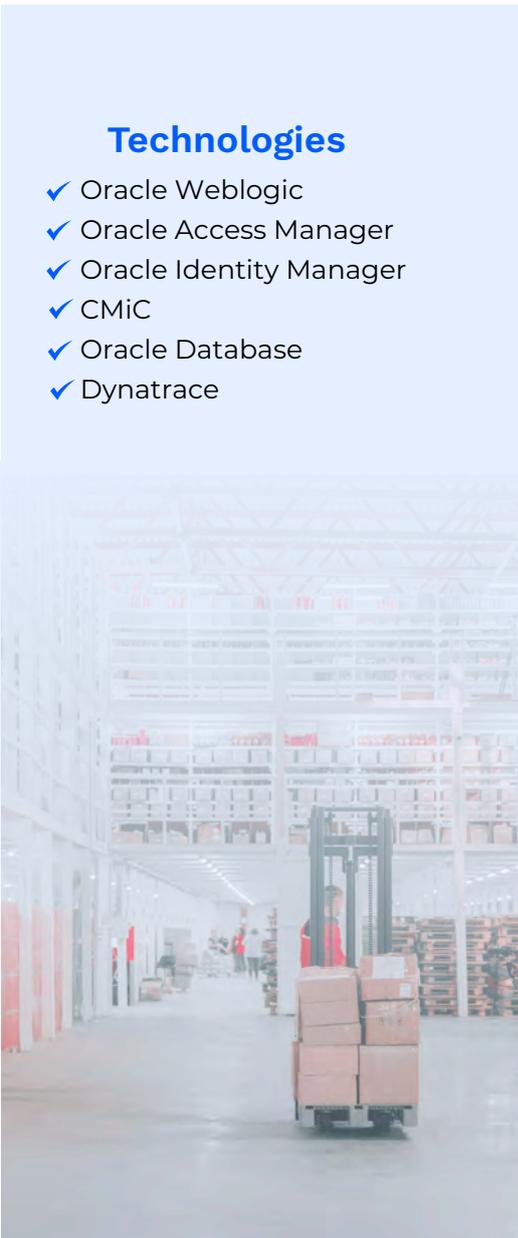

As one of the largest construction firms in Chicago, Walsh Construction Company specializes in general contracting, construction management, and design-build. rSTAR helped Walsh with an entire ERP modernization and optimization initiative, lowering operational costs and enhancing productivity. The company was in the midst of upgrading their ERP, which also required upgrading to a secure cloud platform. They enlisted the help of rSTAR to migrate their ERP which helped to strengthen its infrastructure and core functionality.

Goals

- ✓ Upgrade to a secure cloud platform inside a tight timeline
- ✓ Correct unwanted application behavior
- ✓ Create monitors in place to handle them

Business Challenges

- ✓ An aggressive up-grade timeline
- ✓ Impending higher domestic and global usage optimization requirements to maximize their ERP investments
- ✓ Scalability requirements to utilize the full potential of the application infrastructure
- ✓ The need to capture vital operational metrics and performance analytics
- ✓ Critical security requirements to solve known performance, security, and scalability issues

rSTAR's Solution

- ✓ Used rSTAR's Application Planning and Migration Methodology (APMM) as a service to uncover the complexities involved
- ✓ Implemented and enforced optimized application behavior including enhanced load balancing and streamlined SSL communications
- ✓ Corrected unwanted application behavior and established appropriate monitors in place to proactively handle them
- ✓ Migrated Walsh's ERP application environment to a more stable, scalable, and optimized application architecture

Outcomes

Added monitoring to identify and prevent problems

Improved visibility and analytics for reporting tasks and response times

Created new focus on enhanced user functionality

Improved performance and application stability

Created robust application platform

Maximize your ROI with rSTAR
